

# **Piezoresistive accelerometer** Model 7264C

## Key features

- 500 g and 2000 g full scale ranges
- DC response long duration transients
- 0.005 damping ratio meets NHTSA SA572-S4
- Mechanical overtravel stops
- Small size, rugged
- Crash and shock testing

## Description

Model 7264C is a very low mass piezoresistive accelerometer weighing about 1 gram. This accelerometer is designed for crash testing, rough road testing and similar applications that require minimal mass loading and a broad frequency response. This accelerometer meets SAEJ211 specifications for instrumentation for impact testing and SAEJ2570 specification for anthromorphic testing. It is a direct replacement for model 7264-2000 in that the location of the center of seismic mass is the same.

7264C utilizes an advanced micromachined sensor, which includes integral mechanical stops. This monolithic sensor offers improved ruggedness, stability and reliability over previous designs. 7264C features an undamped sensor design which meets the NHTSA SA572-S4 requirement of 0.005 damping ratio. With a frequency response extending down to dc (steady state acceleration), this accelerometer is ideal for measuring long duration transient shocks and critical for deriving velocity data from acceleration.

This accelerometer has a full bridge circuit with fixed resistors for shunt calibration. Full scale output is 400 mV with 10Vdc excitation. It is also available with less than 1% transverse sensitivity ("T" option) and less than  $\pm 25$  mV zero measurand output ("Z" option).

Recommended electronics for signal conditioning and power supply is the Endevco brand model 436, a general purpose three channel DC conditioner and power supply. U.S. Patents 4,498,229 and 4,605,919 apply.

# Piezoresistive accelerometer | Model 7264C

The following performance specifications conform to ISA-RP-37.2 (1964) and are typical values, referenced at +75°F (+24°C) and 100 Hz, unless otherwise noted. Calibration data, traceable to National Institute of Standards and Technology (NIST), is supplied.

Specifications	11.1	70/40 500	70/46 0000			
Dynamic characteristics	Units	7264C-500	7264C-2000			
Range	g	± 500	±2000			
Sensitivity (at 100 Hz & 10 g)	mV/g typ (min)	0.80 (0.40)	0.20 (0.15)			
Frequency response	Hz					
(± 2% max, ref. 100 Hz)			0 to 2000			
(± 5% max, ref. 100 Hz)		0 to 3000	0 to 5000			
Mounted resonance frequency	Hz	17 000	26 000			
Damping ratio	Max	0.005	0.005			
Non-linearity						
(% of reading, to full range)	% max	±1	±1			
Repeatability						
(after full scale shock)	Equiv. g	0.2	0.2			
Transverse sensitivity [1]	% max	3 (1 optional)	3 (1 optional)			
Zero measurand output [2]	mV max	$\pm$ 50 ( $\pm$ 25 optional)	$\pm$ 50 ( $\pm$ 25 optional)			
Thermal zero shift	mV typ	± 10	± 10			
From 0°F to +150°F (-18°C to +66°C), ref 75°F (24°C)	mV max	± 10 ± 25	± 25			
		-0.06	-0.06			
Thermal sensitivity shift From 0°F to +150°F (-18°C to +66°C)	%/°F typ %/°C typ	-0.08 -0.10	-0.08 -0.10

### Piezoresistive accelerometer | Model 7264C

Accessories		
Options	Description	7264C
EHM35	Allen wrench	Included
EHW196	Size-0 flat washers (x2)	Included
EH828	0-80 x 3/16 inch socket head cap screw (x2)	Included
24328-3	Conductor shielded cable	Optional
7953A	Triaxial mounting block	Optional

## Notes

- 1. 1% transverse sensitivity available as "T" option.
- 25 mV zero measurand output available as "Z" option. 2.
- Iternate excitation voltages up to 12.0 Vdc may be used, but should be specified at time of order to obtain best calibration. 3.
- 4. Measurand at approximately 1 Vdc. Bridge resistance increases with applied voltage due to heat dissipation in the strain gage elements.
- Maintain high levels of precision and accuracy using Endevco's factory calibration services. Call Endevco's inside sales force at 5. 866-ENDEVCO for recommended intervals, pricing and turn-around time for these services as well as for quotations on our standard products.
- 6. Model number definition:
